

REMARKS/ARGUMENTS

Applicant requests that the title be changed to more accurately reflect the claims herein presented. In the pending US case (SN 732,326, FLOW-THROUGH OXYGENATOR) a restriction requirement was entered asserting that more than one invention was described. Likewise, the PCT application was noted as lacking unity of invention. Applicant has selected the invention claimed in claim 8 to prosecute, an invention more aptly described as WASTE WATER TREATMENT.

Accordingly, claims 1-7 are canceled, claim 8 is amended and newly presented claims 9-14 are presented. Support for these claims is found on page 16, lines 1-7 of the specification. Additional support for claim 12 is found on page 2, lines 5-14 which describes a microorifice capable of generating microbubbles of oxygen.

The claims being amended to more distinctly claim the invention, Applicant respectfully requests that a timely Office Action be issued in this case. Applicant requests that Figure 8 be printed with the application.

Respectfully submitted,
Applicant James A. Senkiw, by his
Attorney,

A handwritten signature in black ink that reads "Kathleen R. Terry". The signature is fluid and cursive, with the first name being the most prominent.
